

DESIGN YOUR CORE

Define the essential elements that drive your impact and sustainability.

CORE INGREDIENTS		NON-ESSENTIAL INGREDIENTS
Elements that you absolutely need to have to achieve your intended impact		Elements that are not contributing to achieving your intended impact
<p>CASE STUDY EXAMPLE: CHDC identified that delivering their programme over 16 weekly, in-person sessions is essential - sessions must happen weekly to ensure parents have the time to practise the lessons learnt between sessions, while maintaining momentum.</p>	<p>However, the sessions can happen anywhere, but must be delivered in a safe neutral space eg. community hall.</p>	<p>A non-essential ingredient is providing refreshments, such as soda. While this made parents more interested in coming and was generally a positive thing, it wasn't essential in order for the programme to have its intended impact.</p>
<p>Your answers here...</p>	<p>Can this essential element be flexible? If yes, how?</p>	

TIP:

Think of it like a pizza! For example, your pizza's essential ingredients may include tomatoes and cheese but what type of cheese used can be flexible. For example, others recreating your pizza may choose to use Mozzarella or goats cheese but this will still create the same intended impact of creating a delicious pizza!

TIP:

Remember to watch the video case study providing more information on how CHDC has used the 'Design your Core' tool to define the essential elements that drive impact and sustainability.
